SiMPore Announces Completion of \$1.25 million Investment Round

ROCHESTER, N.Y. – June 13, 2008 – SiMPore, Inc., a developer of advanced membrane products, today announced completion of a \$1.25 million common equity offering. Proceeds from this investment offering will be used by the company for marketing, selling, production and distribution of SiMPore protein separation and TEM products, for marketing co-development partnerships and licensing, and for equipment, working capital and general corporate purposes. Individual investors, primarily from the Rochester region, including investors from the Rochester Angel Network, provided the funds.

About SiMPore Inc.

SiMPore is a Rochester, New York-based nanotechnology start-up company that designs and produces membranes and membrane-enabled products based on its unique patent-pending platform technology—the UltraSM™ ultrathin nanoporous silicon membrane. The UltraSM™ membrane is the world's first membrane to offer both tunable nanometer-scale thickness and pore size. SiMPore is developing products that take advantage of these one-of-a-kind features, including filters for separating and concentrating biological molecules and nanoparticles, cell culture substrates for growing cells, and electron microscopy grids for preparing and imaging samples at the nanoscale.
